**eCycle launches two new marine products; both based on SolidSlot™
brushless motor/generator**

(Temple, PA – January 2, 2007) – eCycle, Inc, a manufacturer of high-efficiency brushless motors and generators, is pleased to announce two new marine products; A 10kW Marine Auxiliary Power Unit and an Electric power head for Yamaha lower units. eCycle's marine products represent the company's dedication to environmentally responsible boating. Both products enable reductions in operational and maintenance costs as well as emissions.

- Marine Auxiliary Power Unit - The marine auxiliary power units (APU) are based on the Kubota Z602 and D902 Super Mini Series diesel engines. Depending on the application, they can be configured to produce up to 10kW at regulated low voltage (14 or 28VDC) with current up to 400A continuous. These units part of a hybrid propulsion system or to generate AC power via an inverter.
- Electric Powerhead for Yamaha- eCycle integrates its proven brushless motor technology into readily available Yamaha 6, 8 and 9.9hp outboard lower unit. The result is a reliable, safe and economical electric propulsion solution for a wide variety of boats and applications. Performance is rated at 9hp at 24 volts. The electric outboard is ideal for fishing boats, sailboats and many commercial applications.

The innovative brushless SolidSlot™ motor/generator is at the heart of the company's marine products. SolidSlot™ is named for its design, which replaces traditional copper windings with solid bars of aluminum linked together with copper end turns. This enables eCycle's marine products to deliver improvements in performance while simultaneously improving efficiency and reliability.

The electric powerhead for Yamaha will be on display in the Inland Marine Booth #36 at the Providence Boat Show in downtown Providence, Rhode Island January 11-14, 2007.

About eCycle (www.ecycle.com)

Established in 1996 and located in Temple, PA, eCycle produces a line of advanced brushless motors and generators, which have a wide range of applications in commercial, industrial, and consumer markets worldwide, particularly for mobile applications.

About Inland Marine, Inc.

Inland Marine, located in Chepachet, RI is an authorized full line Yamaha outboard dealer, MerCruiser Sterndrives and Mercury outboard authorized dealer and servicing all brands. Specialties include boat sales, outboard motors, electric boat drives, equipment and supplies, service and repairs and dock systems.
